

```

— JUnit Jupiter ✓
  — ComputationsTest ✓
    — toCelsius: boiling point 212F -> 100C ✓
    — toFahrenheit: 100C -> 212F ✓
    — toFahrenheit: 0C -> 32F (edge case) ✓
    — isOdd: positive odd numbers return true ✓
    — toCelsius: -40F -> -40C (the famous crossover point) ✓
    — isEven: positive even numbers return true ✓
    — toFahrenheit and toCelsius should be inverses ✓
    — fibonacci of small values matches the known sequence ✓
    — toCelsius: body temperature 98.6F -> 37C ✓
    — fibonacci of larger value (15) is 610 ✓
    — fibonacci(1) is 1 (edge case) ✓
    — isOdd: negative odd numbers return true ✓
    — isEven and isOdd should always disagree ✓
    — isPrime: perfect squares of primes are composite ✓
    — isEven: negative even numbers return true ✓
    — toCelsius: freezing point 32F -> 0C (edge case) ✓
    — isPrime: known small primes return true ✓
    — toFahrenheit: -40C -> -40F (crossover) ✓
    — isPrime: numbers <= 1 are NOT prime (edge cases) ✓
    — isPrime: 2 is prime (smallest prime - edge case) ✓
    — isPrime: composites return false ✓

    — isPrime: numbers <= 1 are NOT prime (edge cases) ✓
    — isPrime: 2 is prime (smallest prime - edge case) ✓
    — isPrime: composites return false ✓
    — isOdd: 0 is NOT odd (edge case) ✓
    — fibonacci(0) is 0 (edge case) ✓
    — isEven: odd numbers return false ✓
    — fibonacci of negative input throws IllegalArgumentException ✓
    — isEven: 0 is even (edge case) ✓

  — ArrayMinimumTest ✓
    — allValuesShouldBeAtLeast20() ✓

  — TestExecutionOrderTest ✓
    — thirdTest_shouldStillRun() ✓
    — secondTest_shouldStillRun() ✓
    — firstTest_intentionallyFails() ✗ First test fails on purpose to prove t
the others still run ==> expected: <1> but was: <2>
